

We, at Crystal Clear Pet Products LTD., are proud to be exclusive UK importers for the excellent **AK Super Clumping Litter**.

WHAT IS IT?

AK Super Clumping Litter is produced from natural white bentonite which is only found in Turkey.

EXCELLENT UNPLEASANT ODOUR CONTROL – PLUS!

Immediate urine absorption ensures that unpleasant urine smells are locked inside the litter. An added bonus is that the litter gives off a very pleasant, “Baby Powder” scent on contact with liquid waste

LONG LASTING / ECONOMICAL

A 1 x 10kg bag should last an average size, healthy cat for a whole month. Terrific absorption levels of liquid give tight, hard clumps of waste. This means that only small amounts of litter are thrown away at any time. The remaining granules stay **fresh, clean & cat odour free**, ensuring that you do not have to throw away the remaining litter. Only a minimal amount of “topping up” is required. The litter’s “whiteness” will allow even the smallest amounts of faeces to be detected & extracted from the litter tray.

HYGENIC

Unlike cellulose types of cat litter **AK Super Clumping Litter** helps to prevent the reproduction of bacteria (& unwanted odours). The hard, fast clumping action will also keep down the chance of tracking of faeces outside the litter tray.

NON-ALLERGENIC

AK Super Clumping Litter is non-toxic & non-allergenic as it is formulated from 100% naturally occurring bentonite.

REMARKABLY DUST FREE

For bentonite based litters **AK Super Clumping Litter** is virtually dust free (over 99%) owing to the highly specialised Turkish production facility.

CONSISTENT HIGH QUALITY

Many other bentonite based cat litters can vary in quality from bag to bag. Each bag of **AK Super Clumping Litter** is guaranteed to be the same high quality as the previous one, giving customers peace of mind when it comes to the quality of the contents of their cat’s litter tray.
